

3i Infotech

Intro

Oops

Project

Hibernate

Annotations

Trigger

Stored procedure

What is diamond problem

Hybrid inheritance

Difference between string and string buffer

Inheritance and concrete class

Workflow of project

SQL joins

Restful API

Abstract keyword

Inheritance with example

Sql queries

depedancy injection

flow of project

hibernate

difference spring & springboot

difference string builder & string buffer

why string is immutable

what is maven

what is jpa

what is crud

constructor in java

static variables

ANGULAR QUESTIONS

what is node

what is npm

package.json in angular

routing in angular

authentication and authorization in angular

compiler in angular

regular expression

lifecycle of angular

Abstract class

Spring boot

Strut

SQL joins

Wrapper class

Difference between ArrayList and linked list

Why java is not 100% object oriented

Intro

Access specifiers in java

Method overloading and method overriding

data. Structure, overloading and overriding , types of polymorphism, function and stored procedure, access specifier, arrays list, linked list, multiple inheritance, final keywords , finalize method, delete drop and truncate , collection, collection hierarchy, join, normalization and SQL queries, java is platform independent or dependant, abstract class and interface

Spring boot

Strut

Wrapper class

Difference between ArrayList and linked list

Why java is not 100% object oriented

Constructors
