

This is Shreyas belose from the Feb-2019 batch.I have been with Loginext for 1.5years.

In loginext you will get exposure to various technologies which are currently in demand in the market.

For example,In database technologies we use MySQL,mongoDB,redis,dynamoDB,elastic search etc.

As Loginext is a product-based company, after hiring there will be 6-7 months of training in which you will gain product knowledge and during that time you will be doing bug fixes. If you perform well during this period then you will get a chance in development.

During this pandemic,there is 100% job security and company didn't do any paycut in salary.

Interview process when I was doing CDAC -

1st round -

It was a coding round. There were two problem statements

A.For BE developer

B.For frontend developer

If you want a backend developer profile then you have to solve the traveling salesman problem and if you want a frontend developer profile then you have to build a small webApp.

For both, these problems evaluation was on the basis of

-Output of code.

-Whether you have followed oops principle.

-which data structure you have used etc.

2nd round -

Group Discussion on various topics like

## 1.MNC vs Startup

3rd round -

Technical interview -

In this round, you not only get tested for your technical skills but also about your overall thinking process and way to approach any problem.

Questions asked during my Interview -

- 1.Find the length of linked list
- 2.Find the middle of the linked list using one loop.
- 3.What is spring? Its need.
- 4.Real life scenario in which you will have to assume that you are a product manager and they will give you some situation in that you have to make decisions.

4th round -

Interview with CTO -

- 1.What is saas?
- 2.Anything about Loginext.
- 3.Basic SQL Queries
- 4.Code Snippets will be given to find output (in JAVA)
- 5.Logical Pattern programs
