Q.10] What are the package are there?

Q.11] Explain Singleton?

Q.12] Explain Heap and Stack memory?

Q.13) How will you Handle / declare Exception?

Q.14] How · u will create user-defined Exception?

Q.15] What is differance betn procedure and function?

Q.16] What are the joins? Explain

Q.16) What is view? Explain

* HR Interview
  (It is based on project only)

- They will give you scenarios, they ask you how will you achieve this?

- Like, In my project (Emart), they asked me that they wanted to login from two machines at same time, will you allow?

- . If No, How would you do it?

- How to fetch data of previous transaction? they asked about primary keys & their relationship with other tables?

- How to maintain session? What are the things you have stored in session so, as to maintain particular user's login?
